SUMMARY

Backend Software Engineer specializing in building **high-performance, scalable distributed systems** using Java (Spring Boot), Go, and Python. Experienced in **microservices architecture, performance optimization, and production-grade backend systems**. Proven track record of improving system efficiency, reducing latency, and delivering reliable APIs in real-world environments. Graduate with **Excellent with Honors** in Software Engineering from Cairo University.

EXPERIENCE

Adres

Dec, 2025 - Present

Software Engineer

Amman, Jordan (Remote)

- Contributed to the development and maintenance of a production-grade real estate platform for Sharjah.
- Wrote and maintained high-quality, scalable **Java Spring Boot** code in a real-world enterprise environment.
- Led performance improvements through **Spring framework upgrades** and targeted code refactoring.
- Integrated and managed database migrations using **Flyway**, ensuring smooth version control and deployment.
- Utilized **Redis** for caching to enhance application performance and reduce latency.
- Collaborated on backend optimizations, improving system efficiency and reliability.

Military Service

Dec, 2024 - Oct, 2025

Software Engineer

Cairo, Egypt

- Maintained and extended a mission-critical full-stack system (PHP Laravel + React) in a high-security operational environment.
- Diagnosed and resolved performance bottlenecks, improving system responsiveness under peak load conditions.

Eventec

Aug, 2024 - Oct, 2024

Backend Intern

Cairo, Egypt

- Contributed to rebuilding the company's backend using **Python FastAPI** and **MongoDB**.
- Re-architected the multi-tenant MongoDB schema, reducing query overhead and reducing data usage per tenant.
- Collaborated in an **agile team environment**, integrating CI/CD pipelines and API optimizations.

Digital Egypt Pioneers Initiative

Apr, 2024 - Oct, 2024

DevOps Trainee

Cairo, Egypt

- Designed and deployed containerized applications using Docker and Kubernetes; automated infrastructure provisioning with Ansible across AWS environments.
- Built and configured Jenkins CI/CD pipelines for automated build, test, and deployment workflows on Linux-based servers.

EDUCATION

Cairo University, Faculty of Computer and Artificial Intelligence

Oct, 2020 - Jul, 2024

BCS, Software Engineering

Cairo, Egypt

Grade: Excellent with honors

Relevant Coursework: Software Design and Architecture, Operating Systems, Computer Networks, Java EE, and Database Design.

PROJECTS

- [Code Execution System](#) (Rust, Javascript):
 - Architected a sandboxed backend system in Rust for secure, isolated code execution — handling dynamic dependency resolution at runtime without manual environment setup.
 - Designed for fault tolerance and security-first operation; the system recovers gracefully from malformed or malicious input without exposing host resources.
- [E-Payment Simulator](#) (Java, Spring Boot):
 - Designed and implemented an e-payment backend using Java and Spring Boot.
 - Applied Factory and Strategy patterns for extensible payment provider logic; achieved high test coverage with JUnit and Mockito.
- [Crunch](#) (GoLang):
 - Command-line file compression tool implemented in Go that uses Huffman encoding for efficient, lossless compression.
 - Developed a sleek terminal UI built with Lip Gloss.

CERTIFICATIONS, SKILLS & INTERESTS

- Languages:** Java, Go, Python, C/C++, JavaScript
- Frameworks:** Spring Boot, Spring Security, Spring Data JPA, FastAPI, Gin, Fiber
- Databases:** PostgreSQL, MySQL, MongoDB
- Cloud & DevOps:** AWS (CCP Certified), Docker, Kubernetes, Ansible, Jenkins, CI/CD, Linux
- Architecture:** Microservices, RESTful APIs, SOLID, Design Patterns (Factory, Strategy), MVC, Flyway, Kafka
- Testing:** JUnit, Mockito, ISTQB CTFL Certified
- Tools:** Git/GitHub, IntelliJ IDEA, Neovim, VS Code, Claude Code.
